NEW PRODUCT ANNOUNCEMENT

New Pluto Box Web Server for VersaLog Data Loggers

CAS is pleased to announce the new **Pluto Box** web server appliance for the VersaLog family of compact data loggers. The Pluto Box allows you to view and manage VersaLog data loggers from your web browser. Based on the industry standard **Raspberry Pi** platform, it offers 4 USB ports for direct connection to the data loggers, an Ethernet interface to attach to the network, and a Wi-Fi interface to connect to the network or data loggers with onboard Wi-Fi. The Pluto device server is packaged in a rugged aluminum enclosure suitable for use in industrial environments and supports up to 10 VersaLog data loggers.

Features:

- Email/SMS notifications for alarms and disconnections
- Automatic data download to onboard Flash memory
- Secure password protection
- Accepts USB or Wi-Fi connected loggers plus USB device servers
- Customized web pages with drag & drop controls
- Onboard power for USB connected loggers

The built-in **SiteView-Web** software allows you to view real-time data and download stored data by exporting to CSV, PDF, or PNG image files. You no longer need to take any data loggers back to the office for downloading. The system will download data automatically. If there are any readings beyond the alarm thresholds or a device goes offline, the system will email out email or SMS alarm notifications.

For more information on the new **Pluto Box** Web Server, or to find the ideal solution for your application-specific needs, contact a CAS Data Logger Applications Specialist at **(800) 956-4437** or visit our website at **www.DataLoggerInc.com**.
