

# AEMC RELEASES DATAVIEW SOFTWARE UPDATE

---

## IMPROVEMENTS FOR DATA LOGGERS & POWER/ENERGY METERS

AEMC Instruments has released an update for their Dataview Windows software package. This software is used to configure, view, and download data from many of their data loggers and power/energy meters including the [PEL](#) series, [Simple Logger II](#) series, [DL913/914](#) Models, [L452](#) logger, and the [CL407/607](#) clamp-on meters.

The changes include:

1. Updates to a number of the instrument drivers to address USB connection issues.
2. For the PEL Series, several enhancements to the status screen and control panel. Numerous bug fixes including issues with display of DC real-time values and online help.

The updated software supports both Windows 10 (32 and 64-bit versions) and Windows 11 Pro. It requires a minimum of 2 GB of RAM on Windows 10, 32-bit, or 4 GB of RAM on Windows 10, 64-bit, or Windows 11. It also needs 5 GB of disk space to install the full version with support for the PEL/Powerpad instruments on Windows 10 or 50 GB of space on Windows 11; only 200 MB is required if not installing the PEL/Powerpad support files.

There are two ways to get the update:

1. Update from within the Dataview program. The easiest way is to start the Dataview software, go to the Help menu, and select "Update." It will download and install the new software.
2. If for some reason this does not work, you can download the new version of the software from the AEMC website at:

<https://www.aemc.com/resources/DataviewDirectDownload.cfm>

There is an executable version that will install itself or a zip file that can be manually downloaded and installed.
