

DELPHIN TECHNOLOGY IS CELEBRATING 45 YEARS OF MEASUREMENT EXCELLENCE

CAS Dataloggers is pleased to announce that our partner, [Delphin Technology AG](#), is celebrating their 45th anniversary of providing the very best in data acquisition measurement technology. For nearly half a century, they have led the way with their innovation, passion for excellence, and state-of-the-art technology.

HOW IT BEGAN

Delphin Technology was launched in 1980 by a small team of engineers with a clear vision: to provide precise measurement technology and intelligent automation for industry, research, and development. What began as a small startup with the first prototypes for measurement data acquisition systems quickly developed into a permanent fixture in the industry. Early on, they focused on their own hardware and software solutions – a recipe for success that still stands today.

Since the beginning, Delphin Technology AG has repeatedly broken new ground with the aim of creating precise, reliable, and forward-looking solutions for measurement and automation technology.

MILESTONES IN EVOLUTION

With the first modular systems for process data acquisition and the introduction of the Message series, Delphin laid the foundation for flexible and scalable solutions in manufacturing and testing technology. A comprehensive product portfolio grew from this foundation to include [powerful data loggers](#) such as the Expert Logger, intelligent vibration monitoring with Expert Vibro, and scalable, compact systems like [Loggito](#). In parallel with their innovative hardware, they created [ProfiSignal](#), a software platform that took measurement data acquisition, visualization, and automation to a new level. This success story has continued to evolve with ProfiSignal 20, which supports Windows PCs plus

iOS and Android mobile devices with a flexible client/server architecture.

Support for new capabilities such as decentralized data acquisition, energy and condition monitoring, and networked data centers have also been consistently expanded – developments that have been perceived as trend-setting by the trade press and customers alike.

LOOKING FORWARD

The instrumentation world is changing – and Delphin will continue to lead the way. The future belongs to intelligent solutions that not only measure but also understand, predict, and optimize. Their focus in the next few years will be on:

- **Artificial intelligence & edge analytics:** Their systems will become more intelligent for even more comprehensive analysis in real time.
- **Sustainability & energy efficiency:** New solutions for monitoring and optimizing industrial energy flows.
- **User experience:** Even more intuitive software solutions with a focus on user-friendliness and integration capability.
